

TSKB segregates all waste at source, and hands over different waste types to certified and able companies for recycling and proper disposal; including hazardous waste such as e-waste, fluorescent lamps, batteries, plant-based oils and greases. Bins for e-waste collection are placed at certain locations in the building.

Non-hazardous waste comprising paper and cardboard, plastics, packaging materials and glass are segregated at source and collected separately.

Bio-degradable organic waste is collected in separate bins placed at each floor of the buildings, to be composted.

In 2022, a total of 4.982,5 kg of waste was collected and handed over to disposal companies, of which 4.692,5 kg of non-hazardous waste was recycled and 290 kg of hazardous waste was disposed of in accordance with environmental regulations.

Break-down of different waste items for 2022 is as follows:

Paper-cardboard:	3.290 kg
Mixed packaging:	800 kg
Plastics:	598 kg
Plant-based oils:	225 kg
E-waste:	30 kg
Fluorescent lamps:	25 kg
Batteries:	10 kg
Glass:	4,5 kg

All non-hazardous waste items have been recycled by certified disposal companies. As such, our recycling ratio for 2022 has been 94,2 %.
